

Where to Add White Carrara Marble to Your Home

[White Carrara marble](#) is an iconic marble from Italy. The stone gets its name from where it originates. This exquisite white stone is quarried in the city of Carrara, which is located in the northern part of Tuscany, Italy. The elegant white marble contains shades of white and gray with darker gray veins. Carrara marble is used in everything from sculpture to building design for residential and commercial properties.

This type of marble is known for its distinctive veiny patterns. Because no two natural stones are alike, each slab may have a variety of different shades from brighter white backgrounds to grayer shades. White Carrara marble tends to have softer veins than other types of marble. In addition to the gray veins, this type of marble can also have a slight gold shade to the veins.

Where to Install White Marble

Marble is among the softer, more porous types of natural stone. It can be stained or etched by foods and liquids or harmed by cutting foods directly on the countertop. For this reason, it is best to have it installed in lower traffic areas of the home where the finish is less likely to be damaged. White Carrara marble is an excellent choice for use on a low traffic kitchen island, a butler's pantry, or baking station in the kitchen.

Using marble in the bathroom adds elegance and beauty to the space, but it is best reserved for bathrooms that don't get heavy use. This type of marble is a great choice for a master bathroom vanity top or bathtub surround. It is really not suitable for kids' bathrooms because the marble can be easily stained by liquids and spilled toothpaste.

[White Carrara marble](#) is often used for a fireplace surround. A marble fireplace surround creates a gorgeous focal point in the room and adds a touch of elegance to a living room. The white stone with gray or tan veins is neutral enough to match virtually any color scheme. If you like to change colors in the room often, your fireplace will continue to work with your design changes.

Caring for Marble Surfaces

You can't use just any household cleaner on a marble vanity top or kitchen countertops because the harsh chemicals used in many cleaning products can cause damage to this type of stone. It is important to use a cleaner that is specifically formulated for use on marble, such as [Mr. Stone's Daily Countertop Cleaner](#). This cleaner is easy to use, just spray and wipe to keep your stone looking great without harming it.

Your marble vanity top and kitchen countertops will require sealing up to four times per year with a quality sealer, such as [Mr. Stone's Superior Zero Natural Stone Sealer](#) to protect the stone. Mr. Stone's Superior Zero Natural Stone Sealer is easy to use and provides protection against staining for porous natural stone surfaces, including marble.
