Whether your kitchen is modern or rustic, there are many beautiful black countertop options for you to choose from. While many kitchens feature laminate countertops or surfaces made of materials such as butcher block and stainless steel, this guide will focus on your best stone options for black kitchen countertops.

What Are the Best Types of Stone for Black Kitchen Countertops?

Your best stone options for black kitchen countertops will be granite, marble and quartz. The following will provide you with some information about each.

Best Options

Granite
Marble
Quartz

What is Granite?

Granite is a beautiful natural stone that is also very durable and easy to care for. Granite countertops rose to popularity in the early 1990s when the stone became more affordable. Previously only found in the homes of the wealthy, granite began to be quarried worldwide around this time, which caused prices to fall. Granite is available in many different colors and styles, but black granite looks particularly stylish.

What is Marble?

Marble is one of the finest natural stones on the planet. This beautiful natural stone has been used to construct some of the world’s most famous statues and structures. Marble countertops have long been a favorite of homeowners who want to incorporate natural beauty into their homes. A great way to have this beauty in your home is by installing black marble countertops.

What is Quartz?

Quartz is an engineered stone that is made by combining around 90 percent quartz mineral with about 10 percent resins and pigments. These numbers often fluctuate slightly based upon the specific brand but will always be in the same region. Since quartz is engineered, it is very durable. In addition, you will be able to find virtually any color your heart desires – including some of the most stunning black countertops on the market.
