Granite is an igneous rock that is one of the toughest materials produced by the earth. From this rock comes stone that is used in various construction projects, both inside and outside the home. This guide will focus on the most popular uses of this beautiful natural stone.

How is Granite Used for the Home?

Within the home, granite has many uses – both indoors and outdoors. No matter where it is installed, the stone will look incredible.

Countertops

Granite is one of the most popular countertop materials. Whether kitchen countertops, bathroom countertops or those in other parts of the house, granite countertops are attractive, durable and can add value to your home.

Backsplashes

The perfect complement to any granite countertop is a granite backsplash. Granite slabs provide breathtaking beauty to the home, so incorporating them as both countertops and backsplashes will truly help to highlight the beauty of the material.

Fireplace Surrounds

Since granite is heat resistant, it is a great material to use for fireplace surrounds. Both beautiful and practical, granite is truly the perfect choice for a fireplace surround.

Floors

Another popular use for granite is flooring. Between the different flecks and veining patterns that many types of the stone offer, you can have a floor that is incredibly stylish.

Patios and Outdoor Surfaces

Granite is a tough material, which enables it to not only be used indoors, but outdoors as well. It is an ideal material for patio stones or a granite slab countertop at an outdoor kitchen area.

Staircases

Because it is very good at standing up to wear and tear, granite is a terrific option for staircases.

Tables

Although it does require sealing, granite is one of the least porous natural stones. This makes it a great option for tables, as you will not need to be as delicate with the material as you would need to be with others. That said, you should always be careful around any stone surface.

Shelves

If you are looking to add just a hint of natural beauty to your home, smaller pieces of granite can be used for shelves. When fabricators shape the stone for countertops, there are often remnants left over. These remnants are perfect for gorgeous new shelves.

Walkways

Granite pavers are a popular material for walkways. As with staircases, granite will be able to handle the wear and tear it will face from this use.

Shower Walls

Granite shower walls are an excellent option for your home. With proper sealing, the stone is water resistant.

Where is Granite Used Outside the Home?

While granite has many practical uses in home settings, this natural stone can be seen in public as well. From monuments to cathedrals and even pyramids, you can find examples of granite as a building material all across the world.

Whether it is used to complete a kitchen design, used to build a walkway or anything in between, granite is one of the most beautiful and useful materials produced by the earth. No matter how you choose to utilize it

in your home, you simply cannot go wrong choosing granite. With proper care, which will not require significant effort, your granite can stay in magnificent shape for many years to come. This stone is not just used for granite kitchens and bathrooms, but for so much more. Wherever it is used, it is one of the best material options you can find.
