Raw granite is granite that can be found beneath the earth's surface. This granite is quarried into blocks, which are then cut down into the granite slabs that make your new countertops, backsplashes or other home surfaces.

How Does Raw Granite Form?

Granite is an igneous rock that is formed by the cooling and solidification of magma. It is made up of primarily quartz and feldspar. This raw granite is extracted from the earth at quarries worldwide.

What Happens When Granite Leaves the Quarry?

After granite leaves the quarry, it goes to a fabrication facility. Here, the fabricator will shape and finish the stone according to the needs of your new countertop or other surface. After it is shaped and finished, installers will come to your home to put in your new granite countertop or other surface.

What Can Granite Be Used For?

Granite can be used for kitchen countertops, bathroom vanity tops, backsplashes and many other home surfaces. The natural stone is one of the top countertop options among homeowners.

How Do I Care for Granite?

Granite care mostly requires cleaning, re-sealing and polishing. All three are simple to do and will not take much time. For more information regarding granite care, see [this article](#).

Granite is one of the most durable natural stone materials you can find, which makes it a perfect choice for homeowners looking for stone countertops. It is resistant to heat, stains and scratches. While this is the case, you should not take unnecessary risks such as placing hot pots or pans on your granite countertop. Use trivets and hot pads when placing hot items on the surface and use [cutting boards](#) when preparing food.

How Does Granite Compare to Other Stone Options?

Granite is one of the top choices for many reasons. The combination of beauty and durability you will get from the material makes it a fantastic choice for any home setting. While marble countertops and quartz countertops, among many other options, have their appeal, many of today's homeowners are opting for granite.

[Granite countertops](#) and other home surfaces are ultimately born from raw granite. This abundant rock produces some of the finest quality stone that is shaped and finished to produce the beautiful surfaces you

can see in many homes.
